

Federal Mfg.

Federal Mfg., a Pro Mach company, is a leading provider of integrated packaging products and solutions for food, beverage, household goods, and pharmaceutical companies. Durable construction has been the hallmark of Federal's hygienic filling and capping machinery since 1946. To meet the demands of today's consumer, Federal has developed filling systems that protect the quality, freshness and flavor of milk products without compromise.

Offering net weight, non-contact filling valves, and "E" series contact-type filling valves, Federal can provide an extended shelf life solution tailored to specifications. Federal's systems have demonstrated the ability to fill ultra-pasteurized products while preserving quality and a refrigerated shelf life in excess of 60 days.

At the core of any ESL system is a hygienic environment and controllable cleaning and sanitizing. Federal delivers these conditions by pressurizing the filler enclosure with HEPA-filtered air, periodically and automatically sanitizing the machine's exterior, treating bottles and closures, and cleaning the filler with a dedicated CIP/SIP system. Other features available to extend code life include chemical dosing for accurately controlling the concentration of cleaning agents used in CIP, sterile air and sterile water generators, and filler bowls that can be sterilized with pressurized water or steam.

Federal is authorized to affix the 3-A symbol to their ESL fillers. All filling and capping products are built in Milwaukee, Wisconsin.
