

# Supplier Capabilities Spotlight

## T.D. Sawvel Co. Inc.

The Model 80 is one of T.D. Sawvel's most versatile machines, providing a highly flexible platform for makers of ice cream and other frozen desserts. Now this machine is even better.

The new fully automatic Model 80 still offers container de-nesting, indexing and filling, as well as automatic lidding. It also offers the ability to place tamper-evident, mylar inner seals from roll stock.

Now ice cream and frozen dessert makers can choose the Model 80-SQRND Dual Lane Inline Time Filler, which is specifically designed to handle the increasingly popular square-round shape.

Model 80-SQRND Dual Lane Inline Time Filler

The Model 80-SQRND gives users a boost in the tough competition for busy food shoppers' attention. That's because the oval-shaped square-round packages match the facing of the old-fashioned brick pack even while offering the ease of use for the customer of round packs. (No more pesky corners that make it tough to get the last of the ice cream from the package.) The new Model 80 handles package sizes from 48-64 ounce sizes, featuring time fill, variable speed AC inverter drive and speeds up to 120 containers per minute.

With a wide range of tooling, the Model 80 can be tailored to handle users' unique packaging requirements.

Since 1976, T.D. Sawvel has been providing automated solutions for denesting, filling, sealing and capping a wide range of packaging shapes and sizes between 1 ounce and 6 gallons.
