

SupplierCapabilities Spotlight

Delkor Systems, Inc.

While Delkor's history in dairy packaging and large dairy install base (over 1,000 machines) show a strong commitment to the industry, it is our continuous stream of innovations such as the Cabrio Case® that keep us at the top of the list when it comes to packaging machinery providers.

Whether you are seeking case-packing systems, cartoning lines, shrink-bundling solutions or high-speed pick & place loaders, our broad range of versatile packaging equipment (over 40 machines) ensure that we have you covered.

All Delkor packaging machines offer fast, simple tool-less changeover and maximum versatility in terms of package formats, size ranges, and speeds. Built-in inspection points and inline rejects ensure that non-conforming products are discharged without interrupting the packaging process, while our intelligent positioning provides perfectly square cartons and cases.

Latest package designs

From our new patents pending Cabrio Case® SRP for pouches to our proven cost-saving patented Spot-Pak® packaging for rigid containers, Delkor is turning heads at manufacturers that are working to satisfy the latest SRP requirements and cost reducing efforts at large retailers. Whether you are looking at the Cabrio Case or the other new SRP designs on the market, the versatility designed into our packaging systems helps you meet current requirements while protecting your investment regarding future changes to package format.

One packaging system, multiple format capability

Multi-format machine lines that can produce low-cost pad-shrink, retail-ready tray-shrink, and full corrugated shipper packaging are available to suit a wide range of rigid packaging, and with speed capacity to match the latest filler designs.

Similarly, our flexible equipment produces material-saving shippers as well as a wide variety of SRP designs.

Changeover is no longer a chore

Delkor's packaging machines and systems are known for flexibility and simple, fast, tool-less changeover between formats. Our Trayfecta and Capstone machines offer changeover times of just a few minutes, and a full system changeover in less than 10 minutes is commonplace. Many of our machines, such as the new MSP-200, offer a highly automated changeover with most of the changeover handled by a simple tap on the large color touch-screen HMI.

Single source equipment provider

With over 40 machine models available to form, load, close, or wrap your products, Delkor provides seamlessly integrated package systems. In addition to full systems, individual machine modules are available to complement existing systems or hand-pack operations.
