

Reiser

For more than 55 years, Reiser has been a leading supplier of processing and packaging equipment to the cheese industry. During that time, the company has gained recognition for its high-quality equipment, innovative engineering and technology, and outstanding customer support.

Vemag Cheese Shredder & Depositor

The innovative Vemag Cheese Shredder & Depositor brings a new level of portioning accuracy and waste control to your cheese topping line. The Vemag precisely shreds, portions and deposits shredded cheese all in a single action. Unlike waterfall systems that “rain” cheese shreds onto product and conveyor alike, the Vemag deposits accurately portioned and evenly distributed cheese shreds only onto product. Processors will greatly reduce cheese waste and eliminate recirculating cheese shreds and the resulting cheese dust. Product appearance and uniformity are greatly improved. The savings on reduced cheese waste alone ensures a very fast ROI. The Vemag is USDA 3-A Dairy Accepted. Its stainless steel washdown construction and sanitary design ensure the highest levels of food safety.

Holac Cheese Dicer

Holac is a world leader in cheese dicing and shredding technology. Holac Cheese Dicers provide unmatched versatility and easily produce a variety of uniform product shapes and sizes. The versatile Holac features a removable cutting grid that is quick and easy to change, allowing processors to produce a wide variety of products. A single Holac can cube, shred or flake all types of cheese products and improve yields with consistent size pieces ranging

from 1/8” to 2-1/4”. Holac dicers are designed for easy sanitation and total hygiene.

Repak Form/Fill/Seal Packaging

Repak manufactures a superior line of rugged, high-speed horizontal form/fill/seal packaging machines to produce vacuum, modified atmosphere and skin packages. Repak machines produce high-quality packages with reliable seals that virtually eliminate leakers and returns. They use two 4-point lifting systems in both the forming and sealing stations to generate up to five metric tons of closing pressure for uniform forming and higher quality seals. All models feature rapid air forming to allow the use of thinner, less expensive films while maintaining package integrity. Their hygienic design and stainless steel construction ensure superior sanitation. Compact configurations are available for low volume production, as well as high performance machines capable of the highest production rates in the industry.
