

Big-D Construction

A Menu of Capabilities

Our company understands the needs and demands of your facility and the requirements to comply with regulatory requirements and plant specifics such as FSMA, GMP, HACCP, PSM/RMP, and other programs. The ingredients for success for our customers includes the following:

- Dairy Processing Plants
- Food & Beverage Facilities
- Remodels
- Expansions
- Additions
- Low-Temp Facilities
- Manufacturing & Distribution Facilities
- Tilt-Up Construction
- Green Field
- Brown Field
- LEED/Sustainable
- Service Projects
- Maintenance Support
- Strategically Planned Shutdown
- Support Services

Heart, Soul, Muscle, Mind

We have an appetite to build and a zeal for success. Since our first project for Western General Dairies in 1967, our annual volume growth has grown to more than \$1.5 billion, with Cold Storage, Distribution Centers and Food Processing facilities making up a significant portion of this revenue. And we are hungry for more.

A Language All its Own

Food and Beverage facilities are built on a language of their own – where critical control means systematically identifying, assessing, and controlling health hazards – from construction to production. We speak it. Without a hint of an accent. In fact, we are fluent in Food Processing Plant language, not just Construction language. Besides the value of understanding your product requirements, we have purchasing power with national vendors/subcontractors in dairy brick, specialty flooring, insulated metal panels, refrigeration systems, sanitary drains, low temp doors, dock equipment, and numerous other specialty construction products/trades.

Whether it's a renovation/addition at an existing facility, a cold storage distribution facility, or a processing plant, the focus of our company has never wavered from its roots in this specialized industry.
