

PTI Inspection Systems

PTI VeriCon Leak Detection Systems the most sensitive, the most reliable

PTI's VeriCon testers offer easy plug & play leak testing solutions for inline container testing and for blow molding lines with trimmer mount configuration.

VeriCon leak test systems are very robust and operate 24/7 without loss of sensitivity and require minimal maintenance. The VeriCon Plus series offers several new-to-market upgrades and enhancements. Real time inspection data includes reject statistics and test result trends, allowing for on demand analysis of container quality, with enhanced data collection and data transfer capability. The VeriCon Plus Series also offers increased leak

test sensitivity, with the capability to measure leak rates down to 200 microns, depending on container shape, size and line speed.

- **Trimmer Mount Leak Testers for Blow molding Lines** — single and dual station units.
- **Linear and Continuous Motion Leak Testers** — single and multi-station testers with

inspection speeds up to 150 bottles/minute. View production performance and test results in the plant or at the corporate headquarter level, live in real time.

VERICON SERIES BENEFITS:

- Reliability
- Sensitivity
- Versatility
- 24/7 Operation
- Data Integration & Data Transfer
