

Delkor Systems, Inc.

Delkor Systems, Inc. is the go-to source for innovative solutions to your secondary packaging needs. With an eye on efficiency, Delkor's product line features 37 machines designed to form, load or close a variety of shipping containers, including cartons, cases and trays.

This proven and versatile lineup consistently delivers full flexibility to meet your varied packaging requirements in cartoning, case packing, retail-ready packaging, flat-pad packaging and robotic loading.

Delkor's automated systems can boost productivity while helping to control manufacturing costs. Using intelligent processing, Delkor has developed advanced technology to improve packaging line efficiency. Inspection and detection systems ensure quality and accuracy without line stoppages. Delkor also utilizes servo motors, laser scanners, advanced HMI, vision cameras and high-speed processors to ensure quality, high-performance production.

Delkor's best-selling Trayfecta® Former offers maximum flexibility for forming cases, cartons and trays using corrugated materials, paperboard or microflute. Tool-less changeovers between all these formats can be made in a matter of min-

utes. Latest generation Trayfecta formers use servo-driven controls for all machine motion functions. They are also available in 1, 2, 3 or 4 head configurations to meet any manufacturing line speed requirement. The Delkor Trayfecta® Former series is available in both servo and mechanical models.

Delkor's loaders offer great flexibility to suit any product size and shape requirement with speeds of up to 700 containers/minute. The loaders are equipped to monitor product and case defects and discharge these defects from the machine without stopping production. The highly regarded Spot-Pak® loading system, which utilizes flat pads and shrink wrapping, is noted both for high productivity and its sustainability benefits. Delkor also offers case/carton loaders with integrated closers.

Delkor's Capstone carton closers have a robust, stainless steel design and can run the full range of paperboard and corrugated materials, making them a perfect fit for many retail-ready packaging formats. The Delkor Capstone carton closer is servo driven and equipped with patented Intelligent Positioning™ technology which electronically analyzes the position of each carton flap as it enters the closer

and makes precise adjustments to ensure square folding at speeds of up to 150 cartons per minute. No other carton closer in the world has this capability.

Delkor also backs its machinery with unbeatable parts availability, service and training programs.

While primarily known for its reliable equipment, Delkor also has designed packaging, such as its highly innovative Cabrio Case™, a convertible shipping case that transforms into a retail-ready display with great shelf impact. Ideal for packages such as pouches, it allows the product to load flat, ship flat and display vertically with minimal stocking effort.
