

OYSTAR USA

OYSTAR USA is part of OYSTAR Group, a global company with eight manufacturing plants and several sales and service companies worldwide. OYSTAR develops, manufactures and sells both complete packaging lines and individual machines for the dairy and food industries.

OYSTAR is comprised of established, reputable brands including OYSTAR Hassia, OYSTAR Benhil, OYSTAR Gasti, OYSTAR Hamba, OYSTAR Erca and OYSTAR A+F. The company's product portfolio covers virtually every area of application for packaging machines, including:

- Filling and sealing machines (FS) for preformed cups and bottles, and forming, filling and sealing machines (FFS) for packaging pasty products in the dairy segment
- Food sector packaging machinery including vertical form, fill and seal machines for bags (with the corresponding dosing systems), as well as FS and FFS machines for packaging single portions of coffee, honey, jam, etc.
- Final packaging in trays for point of sale

Recent Developments at OYSTAR include:

- OYSTAR USA introduced the **Oystar Erca M-F 14 Cup Packaging Line** for the form, fill and seal of food products including yogurts, puddings, juices and water. The machine meets all 3-A Sanitary Standards which promotes food safety and public health. The cost-effective machine forms and fills cups of various shapes and sizes at a maximum forming depth of 70mm, and at a maximum output of 21,600 cups/hr. Among the machine's many distinctions is its striking compactness: the M-F 14 occupies up to 70% less floor space than comparable equipment, and offers easy accessibility and an operator-friendly working height of 1050mm (41.33 inches).

- OYSTAR A+F offers the **SetLine Wrap-around Packer**, a multi-functional, versatile end-of-line packaging system that enables a wide variety of packaging solutions for a variety of products. The machine is capable of packing single cups, cup sets and bottles of various shapes and sizes directly into trays or cases, and also can apply display presentation sleeves. An all-in-one machine that provides the ability to sleeve primary packs into multi-packs prior to packing them into trays/cases, the SetLine is capable of packaging cups up to 140mm in height at speeds up to 43,000/hr, and bottles of the same maximum height at speeds up to 30,000/hr.

- OYSTAR USA introduced a chainless transport system for its **OYSTAR Hamba** range of cup, tub and bottle filling lines. Known as **MultiFormat**, the concept allows for automated format changeover that, through time reduction in format changes, can result in production increases of up to 25%. The MultiFormat system

transports preformed containers up to 140mm in height and up to 2,500 grams in volume at speeds up to 57,600 units/hr. The system is lubrication-free, making it ideal for use in hygienic conditions including the production of dairy products.
